The launch, scheduled for 3:22 pm ET, will also mark the first time in nearly a decade that NASA astronauts have launched into orbit from Cape Canaveral, Florida. For NASA astronauts Bob Behnken and Doug Hurley, this will be their second attempt at this historic launch. The first launch attempt, Wednesday, 27 May 2017, is the first launch attempt. They'll get a second chance today. If today's launch is delayed for some reason, the next launch attempt will be on Sunday, May 31 at 3:00 pm ET. NASA plans to cover today's event live, starting at around 11AM ET. If all goes well, they will cover everything from launch preparations to Crew Dragon's docking on the ISS at 10:29 am ET on Sunday, May 31. You can also follow our live blog. When will SpaceX's Crew Dragon launch? SpaceX's Falcon 9 rocket will take off from the company's launch site on Saturday, May 30, at NASA's Kennedy Space Center in Cape Canaveral, Florida. Scheduled launch time: New York: 15:22 / San Francisco: 12:22 / London: 20:22 / Berlin: 21:22 / Moscow: 22:22 / New Delhi: 12:52 (May 31) / Beijing: 3:22 PM 10pm (May 31) / Tokyo: 4:22 (May 31) / Melbourne: 5:22 (May 31) How to watch SpaceX's Crew Dragon launch live: Live stream: NASA is live-streaming event on YouTube and on its desktop viewing website. SpaceX will also stream the event live on its YouTube channel. Live blog: You can follow along with the Verge's SpaceX Crew Dragon launch live blog here, hosted by Loren Grush, Sean O'Kane, and Elizabeth Lapatto. Update 5/31 7:15 a.m.: This post has been updated with a more precise docking time. Tonight, the first operational mission of SpaceX's Crew Dragon spacecraft is set to take flight, carrying a crew of four to the International Space Station. The mission, scheduled for 7:27 pm ET, marks the beginning of regular manned missions to and from the ISS for SpaceX as the company establishes a route to space for NASA astronauts - and Home. On board tonight's flight are three NASA astronauts - Mike Hopkins, Victor Glover and Shannon Walker - as well as Soichi Noguchi from the Japanese aerospace exploration agency. The crew is scheduled to be aboard the ISS for six months, before returning to Earth inside crew dragon in the spring. NASA's live coverage of the flight will begin at 3:15 pm ET, just before the crew begins to fit up in the custom SpaceX pressure suits they will wear on the plane to space. They will then exit to the launch ramp at NASA's Kennedy Space Center around 4pm ET to board the Crew Dragon and be attached inside the spacecraft. Once they are attached in, the hatch will be closed around 5:30 pm ET. When is SpaceX's Crew-1 launch? SpaceX's Falcon 9 rocket will take off from the company's launch site on Sunday, November 15, at NASA's Kennedy Space Center in Cape Canaveral, Florida. Scheduled launch time: New York: 19:27 / San Francisco: 16:27 / London: 12:27 (November 16) / Berlin: 1:27 (November 16) / Moscow: 3:27 (November 16) / New Delhi: 5:57 (16 November) / Beijing: 8:27 am (November 16) / Tokyo: 9:27 am (November 16) / Melbourne: 11:27 (November 16) How to watch SpaceX's Crew Dragon launch live: Live stream: NASA's livestream coverage can be found on YouTube and on the agency's website. On Saturday, December 19 at 9:00 a.m. EST, falcon 9 launched NROL-108 mission from Launch Complex 39A (LC-39A) at Kennedy Space Center, Florida, completing SpaceX's 26th and final missions of 2020. The Falcon 9's first stage booster previously supported the launch of SpaceX's 19th and 20th cargo resupply missions to the International Space Station, a Starlink mission, and saocom 1B missions. After the launch, SpaceX Falcon 9's first leg landed on Landing Zone 1 at Cape Canaveral Space Force Station in Florida -- the 70th day of the year. You can watch a replay of this mission above. Live coverage of the countdown and launch of a SpaceX Falcon 9 rocket from Cape Canaveral Air Force Station in Florida with the SXM 7 radio broadcasting satellite for SiriusXM. Text updates are automatically shown below. Follow us on Twitter. SpaceX's live video webcast begins around 15 minutes before launch and will be available on this page. If you want to see more articles like this you can support our coverage of the space program by becoming a Spaceflight Now member. If everyone who likes our site helps fund it, we can expand and further improve coverage. SpaceX's Falcon 9 rocket was performing as expected and on course five minutes after liftoff. The rocket's booster, also known as its first stage, will attempt to land on the company's station in the sea. SpaceX mission control director: We are honored to have you as our crew as we begin operational missions to the ISS. Have a wonderful trip and know we're all for one. NASA astronaut and spacecraft commander Mike Hopkins: To all people at NASA and SpaceX, by working together through these difficult times you have inspired the nation, the world, and to a small extent the name of this incredible vehicle, Resilience. And now it's time for us to do our part, Crew-1 for everyone. SpaceX has begun firing the Falcon 9 rocket. The fuel is kerosene and liquid oxygen. SpaceX's launch director confirmed that the Falcon 9 rocket is go for propellant load (meaning that fuel of the rocket will begin now) and crew and withdrawal. The company then armed the escape system aboard the Crew Dragon Resilience - this will carry the astronauts away from the rocket very quickly in an emergency scenario. NASA astronaut Mike Hopkins confirmed the launch is good to go shortly after the countdown clock ticked under an hour to lift. The SpaceX mission controller said the second leak control has passed, with teams seeing consistent [pressure] readings to what we saw in dry dress exercise. SpaceX's John Insprucker says a spot of bad weather doesn't see it coming to the launch area before liftoff. Local conditions are good. Insprucker said: The upper altitude wind we look at with the balloons we release and they show us that the conditions at the upper altitude for stability are good. SpaceX had mostly closed the hatch of the Crew Dragon Resilience spacecraft when the company's team identified a drop in pressure while looking for leaks in the seal. The spacecraft then rotated slowly back into the launch position, with the astronauts facing the sky. Vice President Mike Pence said he planned to attend the Crew-1 launch in person. He and his wife are expected to arrive about 6:20 p.m. ET. The four astronauts, after fitting up and talking to NASA Administrator Jim Bridenstein and SpaceX President Gwynne Shotwell, walked out of the Operations & Checkout building. They spoke briefly with their families before entering Tesla Model Xs and drives out to launchpad. They got to the bottom of the rocket with about 3 hours to go before liftoff. Astronauts put on their SpaceX spacesuits and make sure each one works properly. SpaceX's John Insprucker on the launch webcast said that Crew-1 astronauts got a weather briefing at T-4:20:00, with a 50% probability still for the launch delay. But Insprucker added that the weather officer sounded a little optimistic that the weather limit we've seen is coming towards us, maybe not doing it and can stay away long enough. SpaceX and NASA mission controllers for the launch have taken to their consoles, while the company has pressed the fuel inside the Crew Dragon spacecraft Resilience. Resilience.
